Mathematical and theoretical ecology

Organized by Edward Codling and Alex Dumbrell

Preface
Towards the marriage of theory and data
S. A. Levin

Introduction
Mathematical and theoretical ecology: linking models with ecological processes
E. A. Codling & A. J. Dumbrell

Discussion
The logic of ecological patchiness
D. Gruenbaum

Articles
Dynamic noise, chaos and parameter estimation in population biology
N. Stollenwerk, M. Aguiar, S. Ballesteros, J. Boto, B. Kooi & L. Mateus

Can clade age alone explain the relationship between body size and diversity?
R. S. Etienne, S. N. de Visser, T. Janzen, J. L. Olieslager, H. Olff & J. Rosindell

On the application of mixed hidden Markov models to multiple behavioural time series
S. Schlehe-Diecks, P. M. Kappeler & R. Langrock

A review of Bayesian state-space modelling of capture-recapture-recovery data
R. King

How linear features alter predator movement and the functional response
H. W. McKenzie, E. H. Merrill, R. J. Spiteri & M. A. Lewis

Mobbing and sitting tight at the nest as methods of avoiding brood parasitism
S. A. Rands

Models in animal collective decision-making: information uncertainty and conflicting preferences
L. Conradt

Computational ecology as an emerging science
S. Petrovskii & N. Petrovskaya

Founded in 1660, the Royal Society is the independent scientific academy of the UK, dedicated to promoting excellence in science
Registered Charity No 207043
