Computability and the Turing centenary

Organized by S. Barry Cooper and Philip Maini

Introduction
The mathematics of nature at the Alan Turing centenary
S. B. Cooper & P. K. Maini

Articles
Vignettes from the field of mathematical biology: the application of mathematics to biology and medicine
J. D. Murray

Turing's theory of morphogenesis of 1952 and the subsequent discovery of the crucial role of local self-enhancement and long-range inhibition
H. Meinhardt

Chemical morphogenesis: recent experimental advances in reaction–diffusion system design and control
I. Szalai, D. Cuiñas, N. Takács, J. Harvald & P. De Kepper

Towards an integrated experimental-theoretical approach for assessing the mechanistic basis of hair and feather morphogenesis

Wing vein patterns of the Hemiptera insect Orosanga japonicus differ among individuals
E. Yoshimoto & S. Kondo

Patterns of periodic holes created by increased cell motility

The effect of the signalling scheme on the robustness of pattern formation in development
H.-W. Kang, L. Zheng & H. G. Othmer

Turing’s model for biological pattern formation and the robustness problem
P. K. Maini, T. E. Woolley, R. E. Baker, E. A. Gaffney & S. Seirin Lee

A mechanical Turing machine: blueprint for a biomolecular computer
E. Shapiro

Computing by molecular self-assembly
N. Jonoska & N. C. Seeman

Less haste, less waste: on recycling and its limits in strand displacement systems
A. Condon, A. J. Hu, I. Mahlch & C. Thachuk

Discussion
Towards quantum simulations of biological Information flow
R. Dorner, J. Goold & V. Vedral
