Each Interface Focus themed issue is devoted to a particular subject at the interface of the physical and life sciences. Formed of high-quality articles, they aim to facilitate cross-disciplinary research across this traditional divide by acting as a forum accessible to all. Topics may be newly emerging areas of research or dynamic aspects of more established fields. Organisers of each Interface Focus are strongly encouraged to contextualise the journal within their chosen subject.

Cover Image
Naphthalene diimide-phenylalanine (NDI-Phe) conjugates are shown to adopt alternative assembly states in aqueous solution depending on the redox environment. In an oxidizing environment the NDI-Phe conjugates assemble into one-dimensional fibrils. In a reducing environment they assemble into globular micelles that exhibit emergent fluorescence, as shown in this image. From ‘Redox-Sensitive Reversible Self-Assembly of Amino Acid-Naphthalene Diimide Conjugates’ by Wathsala Liyanage, Paul W. Rubeo, and Bradley L. Nilsson in this issue.
